Convert the following algorithm into a program and find its time complexity using the counter method.

```
void function (int n)
{
    int i= 1;

    int s =1;

    while(s <= n)
    {
         i++;
         s += i;
     }
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

For example:

Input	Result
9	12

Answer: (penalty regime: 0 %)

Answer: (penalty regime: 0 %)

```c
#include <stdio.h>

int main() {
    int n;
    int count = 0;

    scanf("%d", &n);

    // Initializations
    int i = 1;
    count++; // count for i = 1

    int s = 1;
    count++; // count for s = 1

    // While loop: count++ inside the condition handles every test of (s <= n)
    while (count++, s <= n) {
        count++; // count for i++
        i++;

        count++; // count for s += i
        s += i;
    }

    printf("%d", count);

    return 0;
}
```

	Input	Expected	Got	
✔	9	12	12	✔
✔	4	9	9	✔

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.
